Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance:

A system for detecting shorted rotor turns in a field winding of an electric generator comprising an impedance measurement circuit to determine a reference inductance and for determining a subsequent inductance in combination with a memory circuit for storing the reference inductance and in further combination with a data processing system that determines if the reference inductance and the subsequent inductance differ by more than a predetermined amount thereby triggering an alarm if the inductances differ by more than the predetermined amount as further described in claim 1 has not been found.

A method of detecting a shorted rotor turn in a field winding of an electric generator comprising the steps of determining a reference inductance of the field winding at an initial time, determining a second inductance of the field winding at a time subsequent to the initial time, comparing the reference inductance to the second inductance and providing an alarm if the reference inductance and the second inductance differ by more than a predetermined amount as further detailed in claims 6 and 11 have not been found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2829

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

West (1432003) and Branch (3932811) show method and apparatus for testing windings of motors and generators.

Abbondanti (4442393) shows an apparatus and method for determining the operation of an induction motor.
